

5 unique steps that **SQLOPS** undertakes during our detailed database Risk Audit.

1 We identify potential risks

SQLOPS conducts a thorough database environment assessment to pinpoint potential risks and issues with precision.

“We dont take chances”

“Basically, We make your data look good”

2 We segment the data

We meticulously clean, categorize, and allocate data according to its significance, ensuring clarity and organization unmatched by competitors.

3 We rectify the data

Our team formulates a comprehensive plan, assigning value to each data item setting us apart with our attention to detail.

“ We take inspiration from Sherlock Holmes ”

“ We inform you what’s important ”

4 We report everything

We deliver a detailed report, elucidating all identified issues and insights, providing clarity and transparency that exceeds industry standards.

5 We get into action

SQLOPS works closely with your team to swiftly address issues, with thorough reassessments, showcasing our commitment to proactive problem-solving.

“ We get it all sorted out ”
